Ru-Bin Won : ScanISBN & PhotographList

General Comments:

Retrospective:

Everyone gives feedback on Part 1 deliverable especially on UML. We assigned workload to each class on the UML which we used to separate the task to each individual.

Planning:

We planned to write the test case and code as fast as possible then we can have an entire week for the user interface before the end of the due day of part 3. Then, we can have most time to work on iteration for the whole period of part 4.
